What Adi said

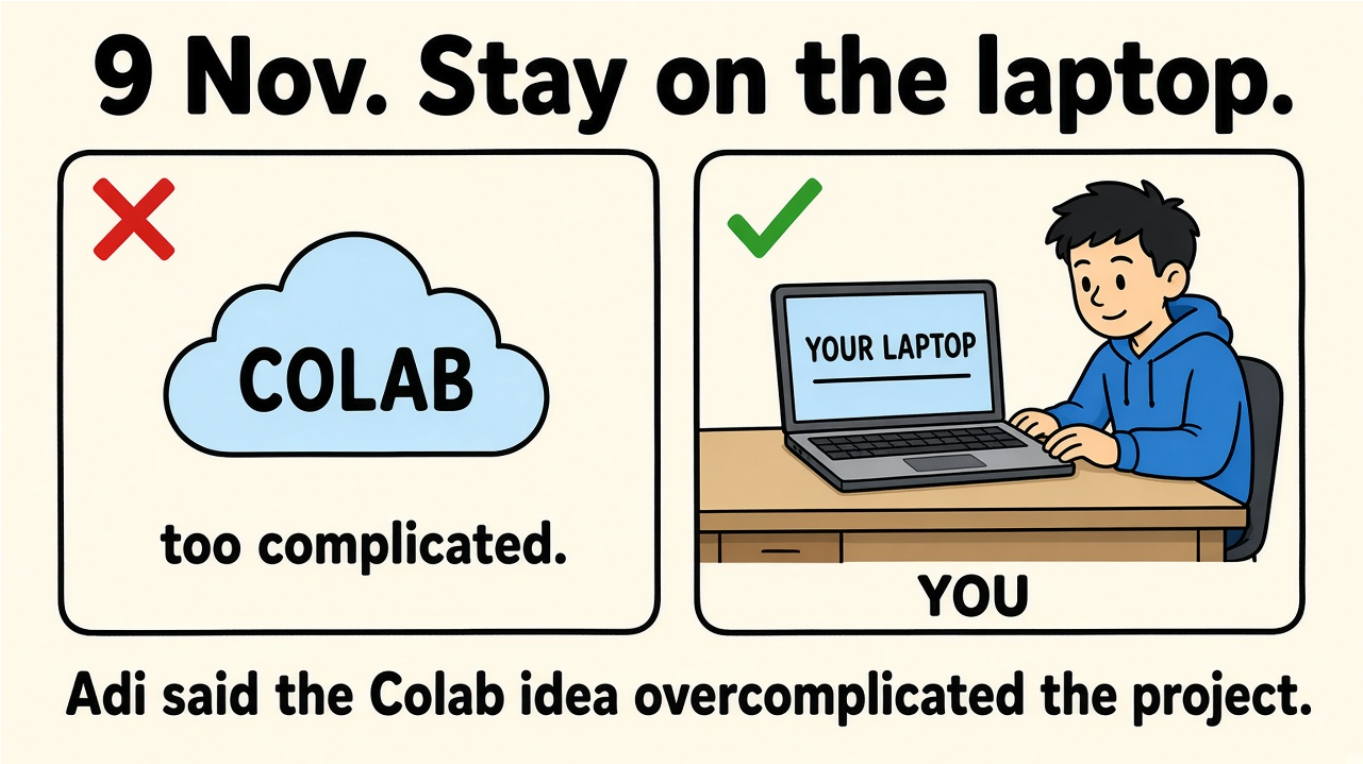

Two calls. Six pictures. 9 Nov is the later instruction.

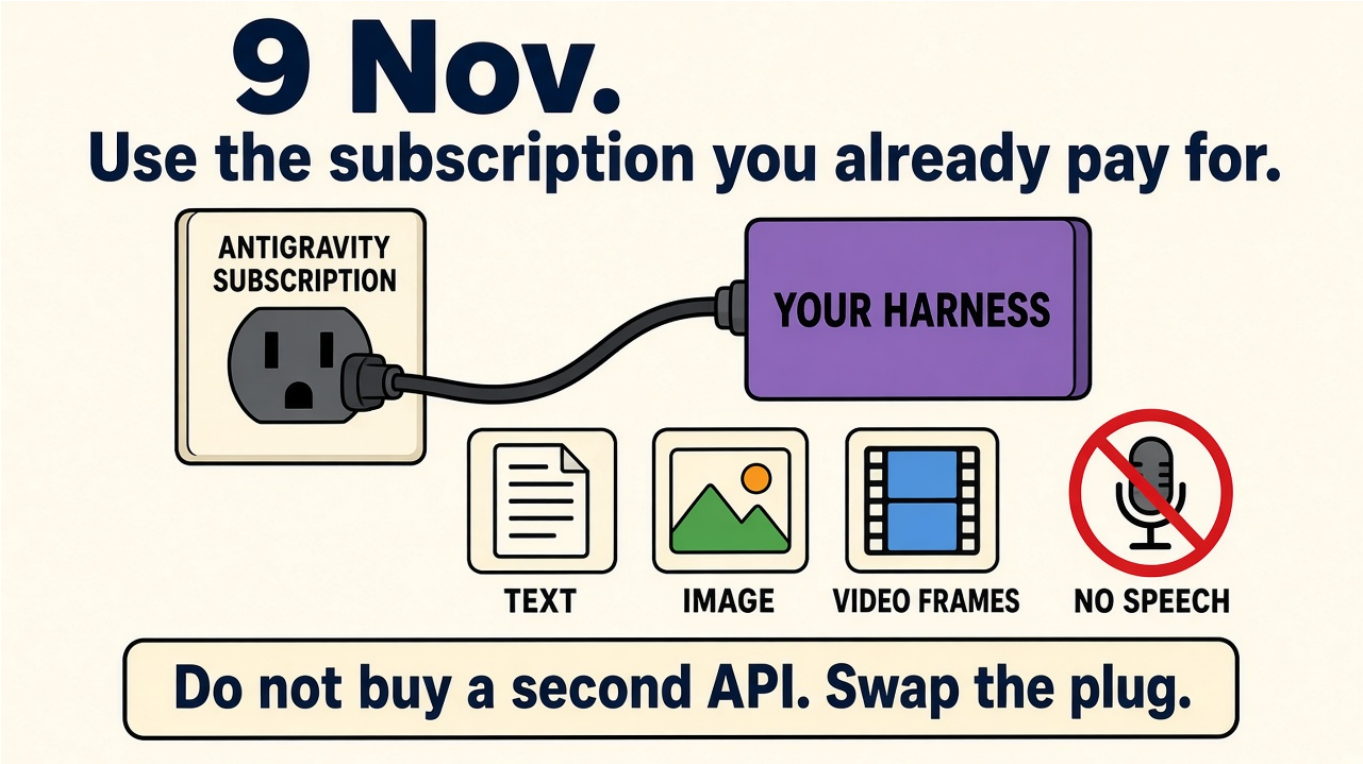

30 Oct. The old Manim robot did one job. The new harness can do any job you give it tools for.

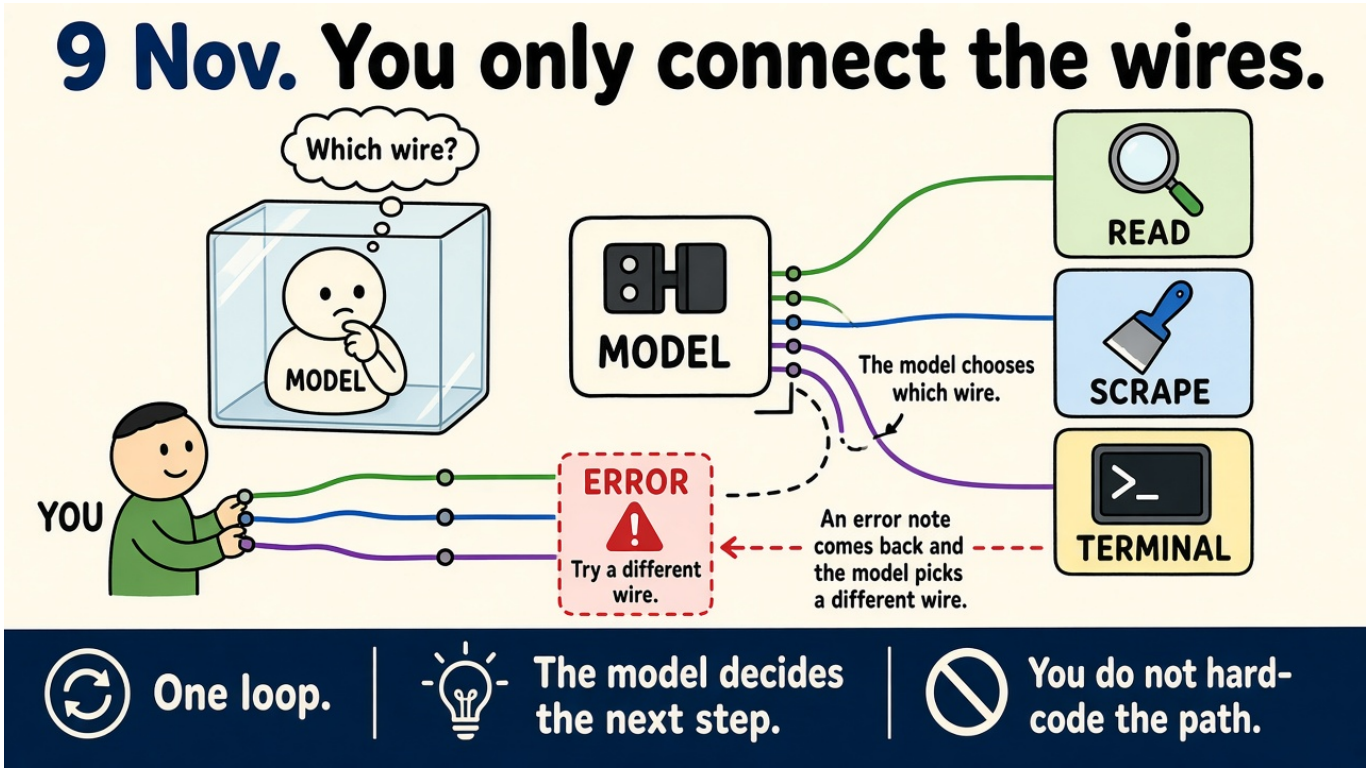

30 Oct. Antigravity may type the code. You read one piece, then the next. Not the whole city at once.

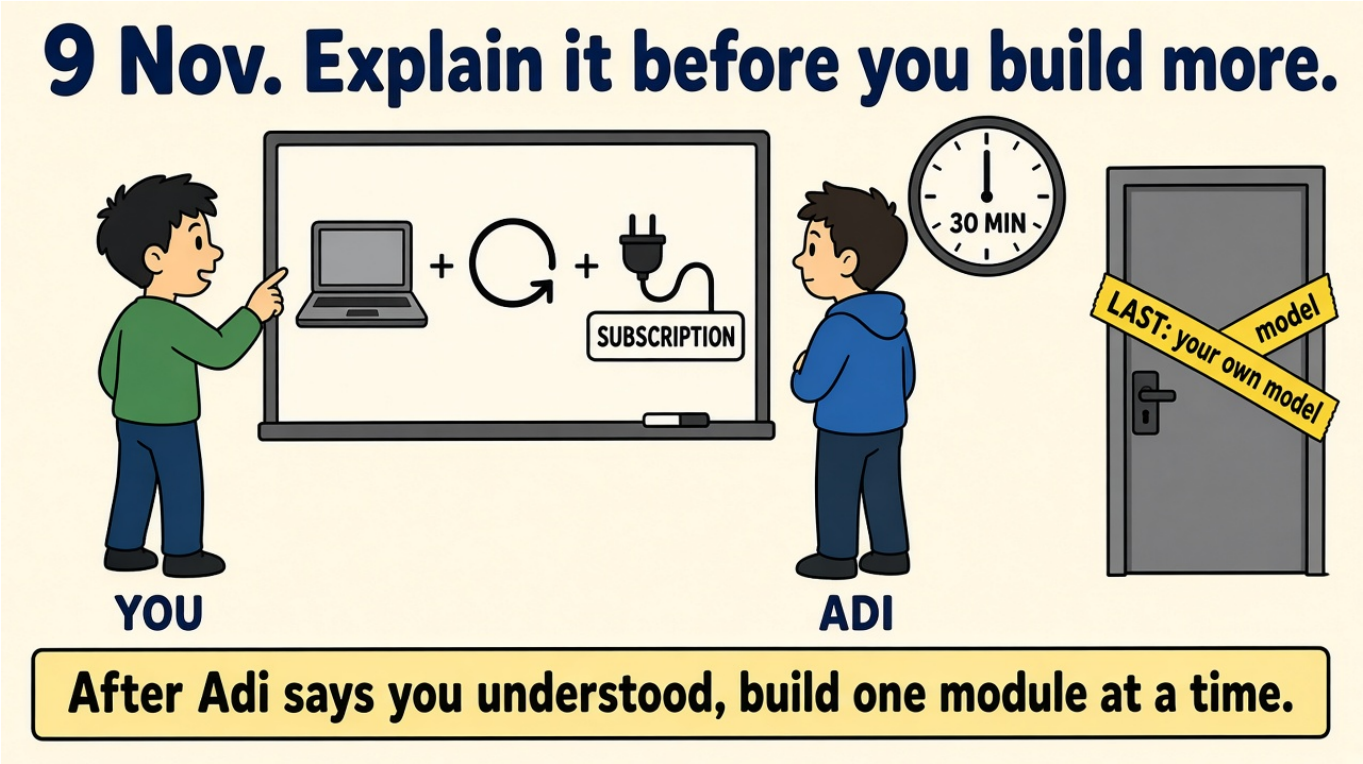

9 Nov. Colab made it too complicated. Stay on your laptop.

9 Nov. Plug the harness into the Antigravity subscription. Text, images, and video frames. No speech.

9 Nov. You connect the wires. The model chooses the tool. An error is a note it can read.

9 Nov. Explain this to Adi for 30 minutes before building more. Your own model is the last door.
