What Adi wants you to build

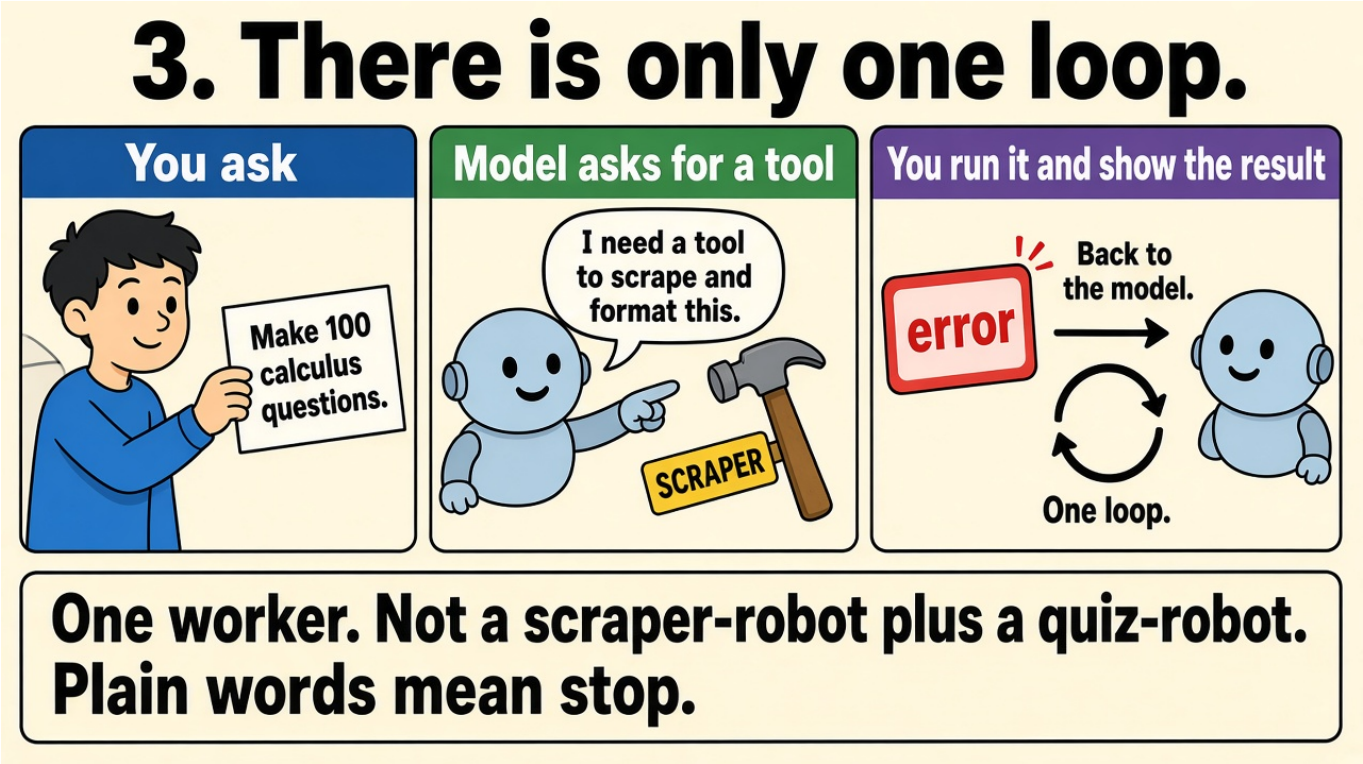

Six pictures. Read them in order. That is the whole assignment.

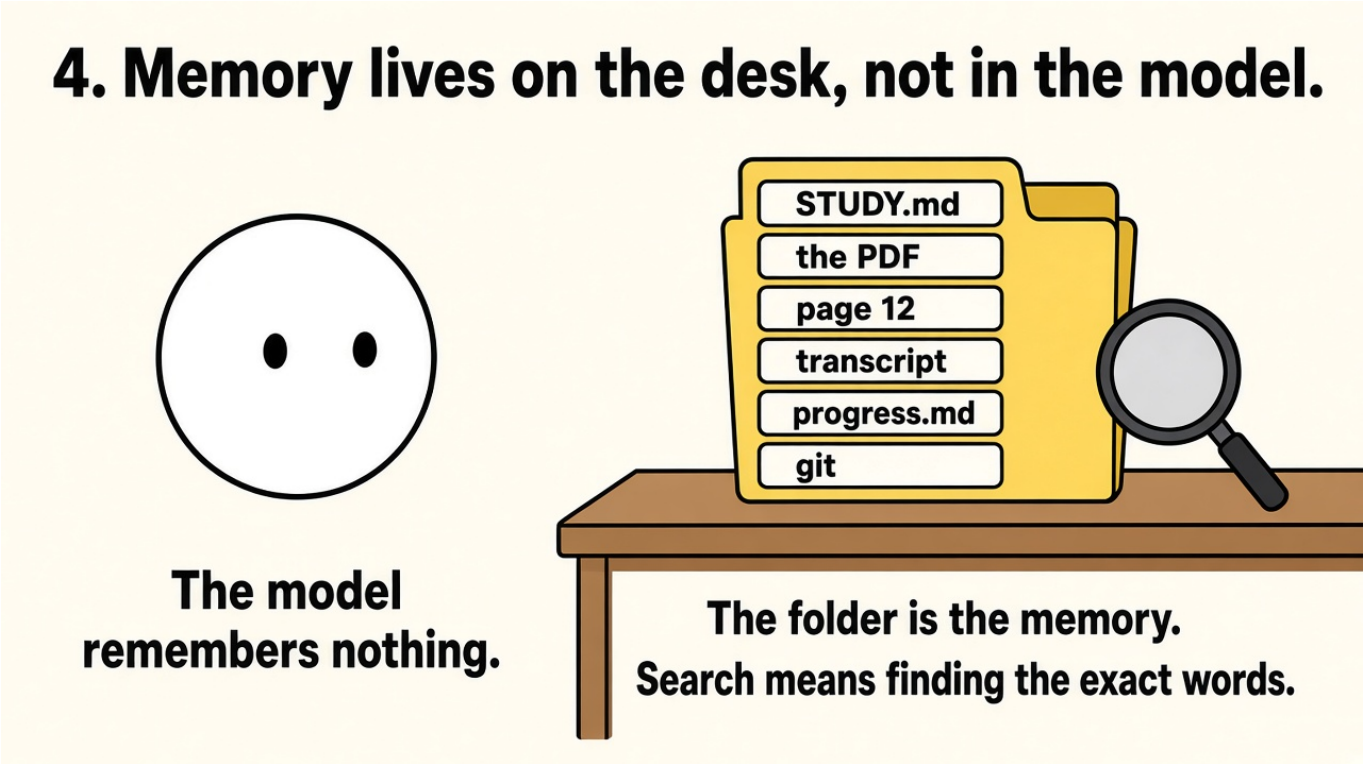

The model can talk. It cannot do anything, and it forgets immediately.

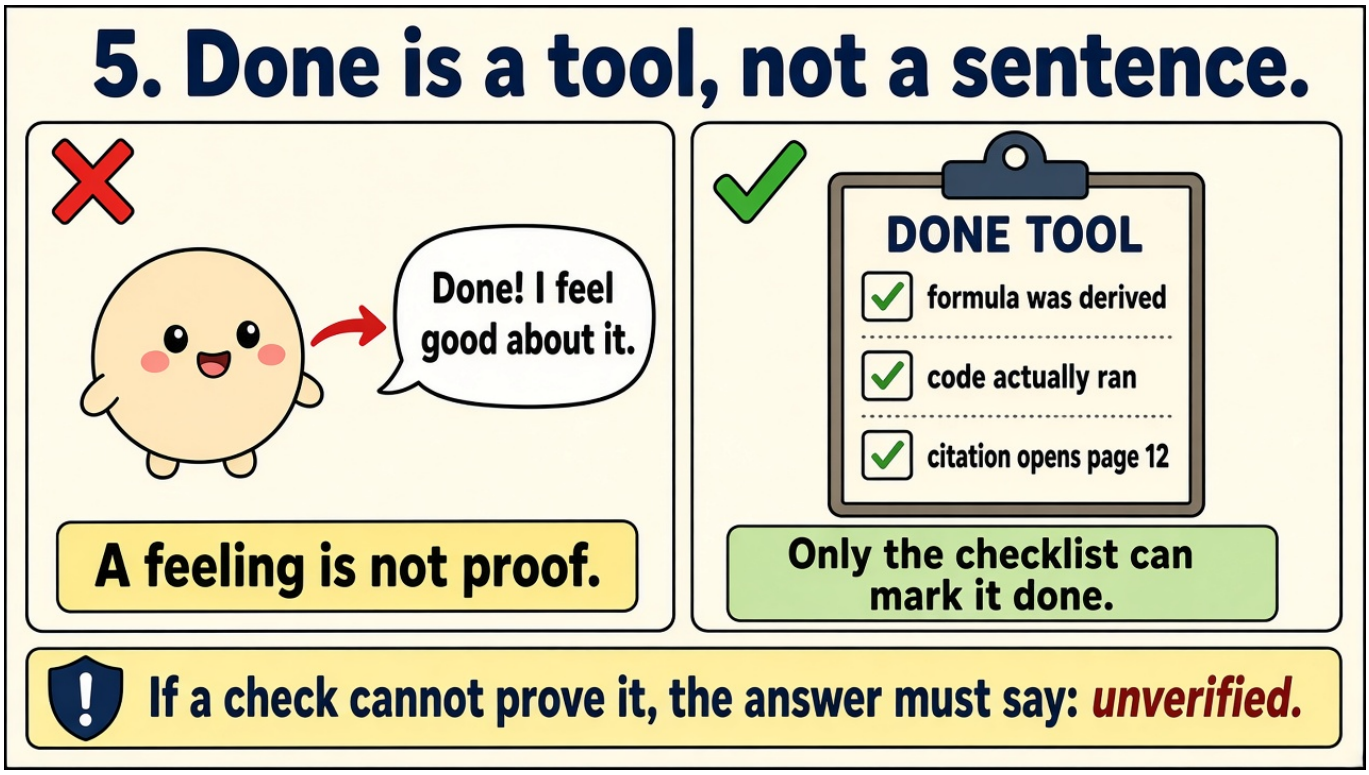

You are building the workshop around it. That workshop is the harness.

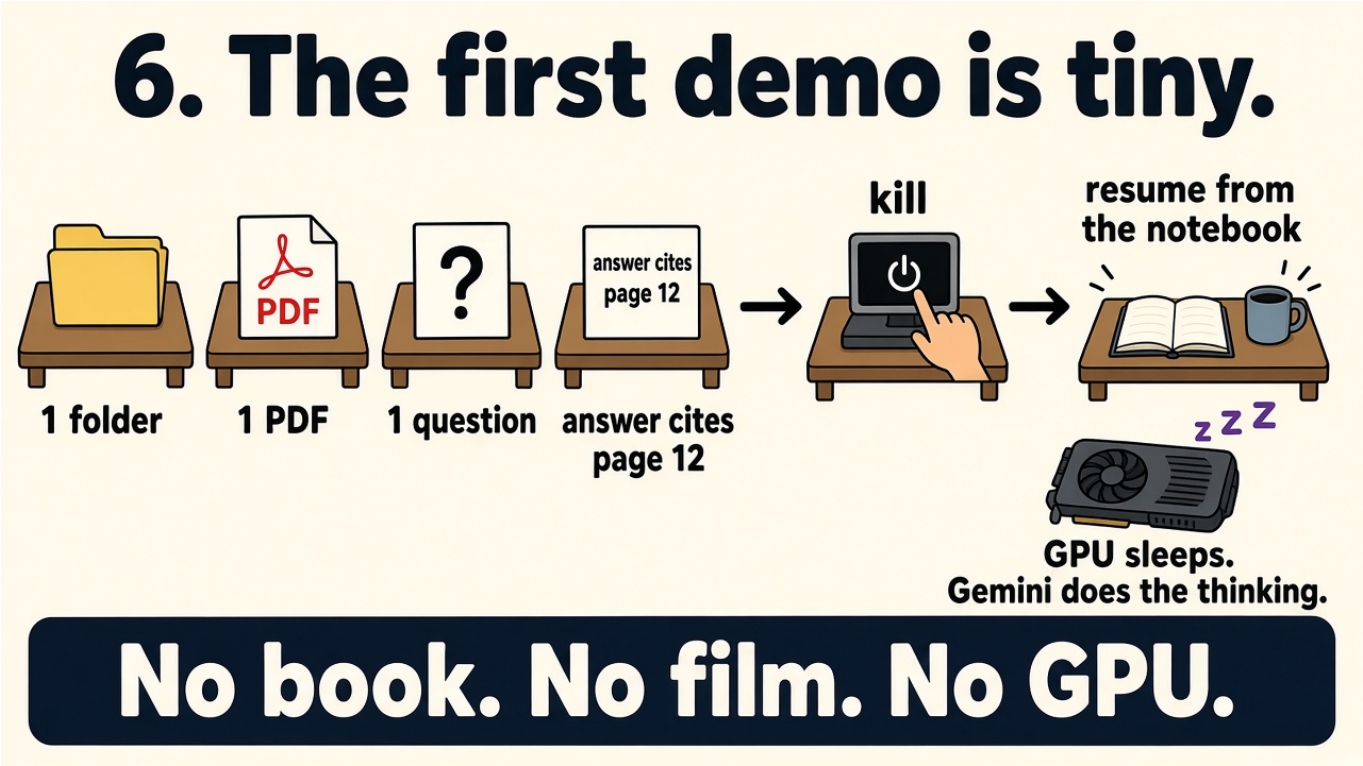

One worker handles every request by asking for tools, including when a tool fails.

The folder remembers. The model does not. Search means finding the exact words.

The model saying done is not enough. A checklist has to pass.

The first thing you show Adi is small: one PDF, one cited answer, then kill and resume.
