What you need to do

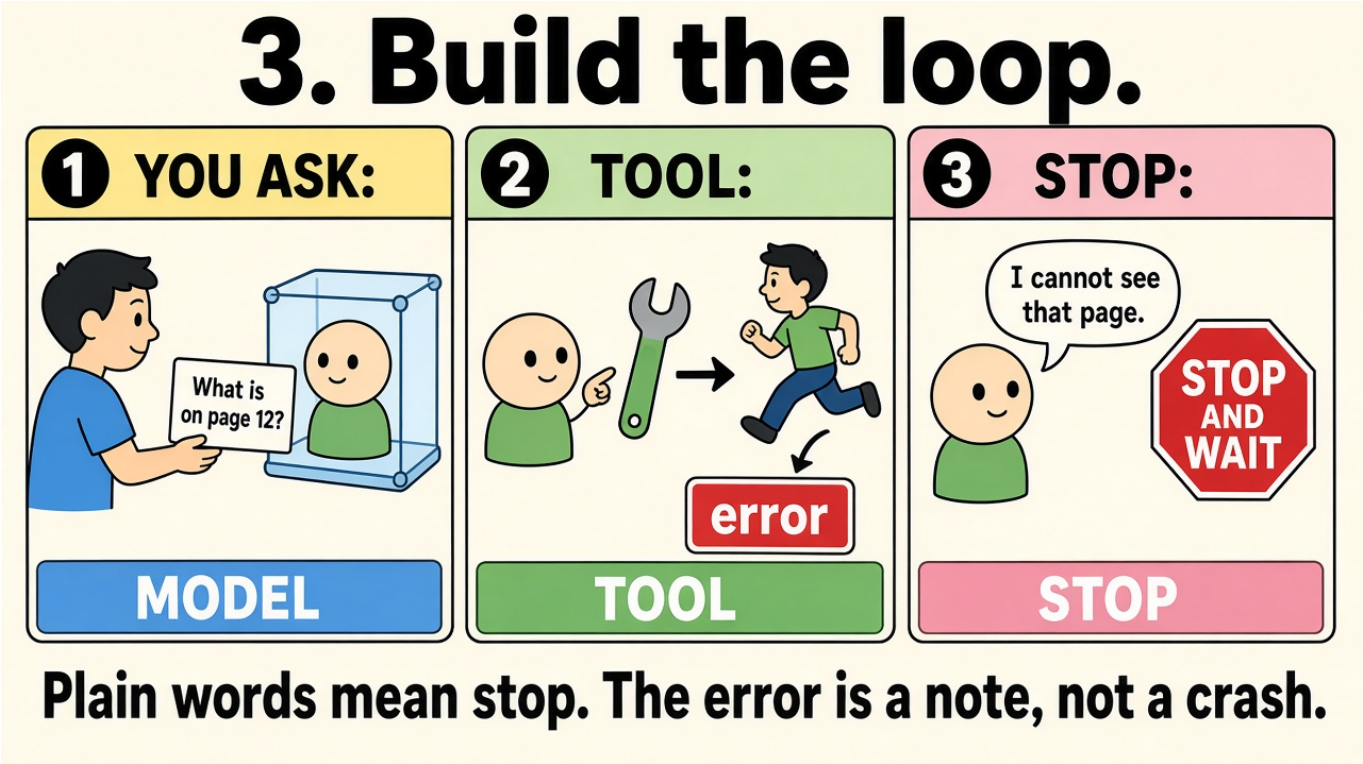

Six jobs, in this order. Finish one before you start the next.

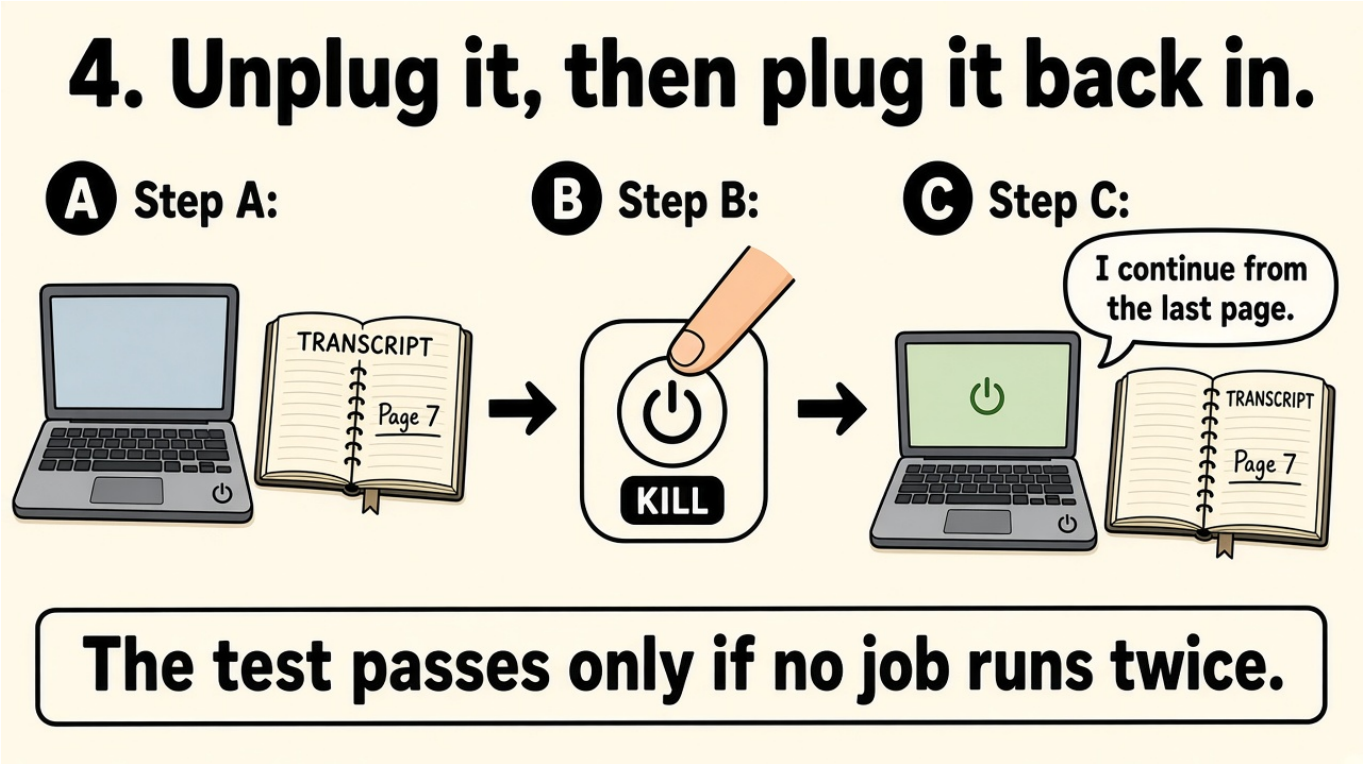

First job: two doors, Gemini and a pretend model. Same tests for both.

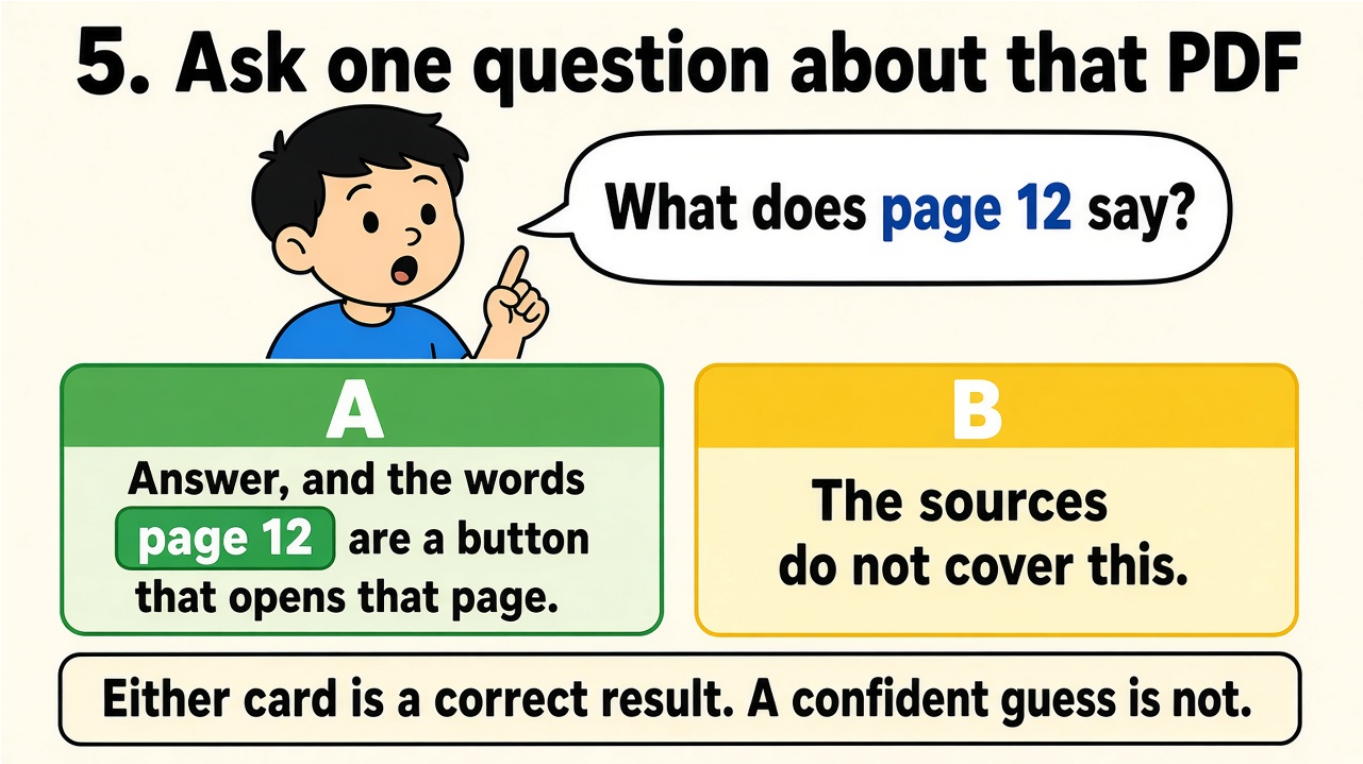

Second job: one PDF becomes text cards that keep their page numbers.

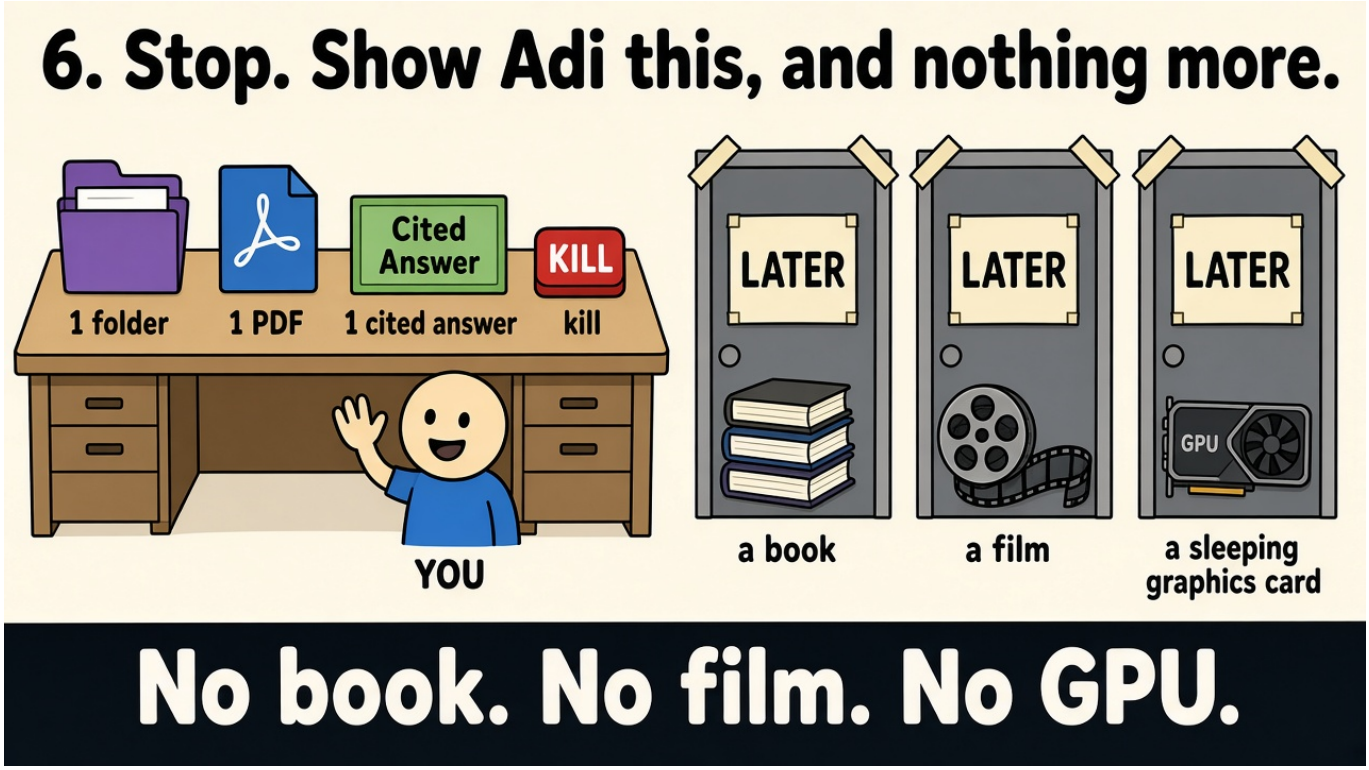

Third job: the loop. Ask, run a tool, hand back the note, stop on plain words.

Fourth job: kill it. It must continue from the notebook, and not do the same job twice.

Fifth job: one question. Cite the page, or say the sources do not cover it.

Then stop and show Adi. Book, film, and GPU stay shut.
